

CARDIOEXPRESS® SL3

DIAGNOSTIC CARDIOLOGY

The SL3 provides an easy to use and uncomplicated interface built into a compact and lightweight design making it an ideal transportable ECG solution.

Features

Portable, lightweight design

- Convenient for mobile use and offices with limited space

Power Supply

- Built-in rechargeable battery, AC/DC power supply
- Over Three Hours recording

Internal Storage

- Holds up to 140 x 10 sec ECG's

Wide Screen

- Foldable screen for increased ECG review Interpretation
- Automatic measurement and interpretation for adults and pediatrics

HRV analysis

- Heart rate variability (HRV) analysis

SCP ECG storage

- Support external ECG review and archiving to Sentinel Cardiology information Management System

Plain Paper Printing

- Several USB printers supported

Memory and data transmission

- Supports external archiving to the Spacelabs Healthcare Sentinel System

Options

- Sentinel Cardiology Information Management System
- Roll stand and carrying bag

Diagnostic Cardiology

For CardioExpress we provide a complete range of trolleys suitable for hospital or clinic use. All trolleys come complete with convenient storage for essential supplies and accessories.

MT-801

Suitable for CardioExpress
SL12, SL6 and SL3

MT-201

Suitable for CardioExpress
SL12, SL6 and SL3

MT-202

Suitable for CardioExpress
SL6 and SL3

Sentinel - Connectivity in Cardiology

Today's hospitals require a cardiology data management system that will facilitate analysis and reporting while also improving efficiency and eliminating errors. Our sophisticated Cardiology Information Management System (CIMS) Sentinel offers that and more – making the most of your product and IT investments while helping you to improve patient care.

Sentinel fully integrates reports from our entire range of noninvasive diagnostic cardiology procedures: Holter monitoring, ambulatory BP monitoring (ABPM), 12-lead ECG, and ECG stress testing. Sentinel

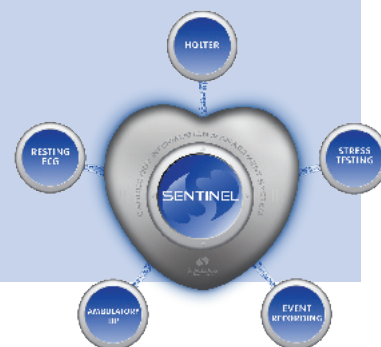

also provides an interface to a number of other manufacturers ECG devices, enabling Sentinel to provide a cost effective solution to your data integration needs.

It organizes the data and stores both details and recordings in a central, networked database – saving time in searching for records and improving your efficiency.

With Sentinel, you have immediate access to the complete information for a given patient, including historic ECG data. Plus, it connects the entire patient record seamlessly – admission, diagnosis, reporting, and discharge – and is designed to integrate with your EMR/HIS system.

We designed Sentinel to work the way you want to – it puts you in control. When you control the workflow, you have greater flexibility to coordinate your procedures, further improving your day-to-day efficiency.

You will find that it's innovative capabilities increase the effectiveness with which clinical data is handled while maximizing capital and operating budgets.
